PROFESSIONAL SUMMARY

Software Engineer with hands-on experience integrating LLM APIs into production applications and building reliable, long-running automated systems on AWS. Uses AI coding agents (GitHub Copilot, Claude Code, ChatGPT) daily to accelerate development, critically reviewing and validating AI-generated output for correctness and production readiness. Strong fundamentals in Python and TypeScript, typed/data-modeled code, workflow orchestration, and data validation at scale. B.S. in Computer Science, eager to apply agentic AI techniques to production systems.

TECHNICAL SKILLS

AI & LLM Engineering: LLM API integration (OpenAI/ChatGPT API), prompt engineering, AI coding agents & AI-assisted development, AI model evaluation & RLHF (accuracy, safety, truthfulness, response quality), agent-based workflow automation (n8n/Zapier)

Programming Languages: Python, TypeScript, JavaScript, Java, C++, SQL

Software Engineering: Object-oriented & typed/data-modeled code, unit/functional testing, automated test suites, code review, debugging, REST API design & integration

Cloud, Orchestration & Deployment: AWS (Lambda, Step Functions, Glue, DynamoDB, S3, CloudWatch, Athena), workflow orchestration, Docker, Kubernetes, Terraform/Infrastructure as Code

Data & Backend: Node.js, Flask, PostgreSQL, MySQL, MongoDB, data modeling, large-scale data validation

Reliability & CI/CD: GitHub Actions, automated testing/linting pipelines, monitoring & telemetry, error handling & retry logic

EXPERIENCE

AI Engineer (Contract)

Cornerstone Construction Co. — Atlanta, GA | Mar 2026 – Present

- Built ProConstruct, a production platform (TypeScript, React, Python, Supabase) unifying field and office workflows; architected a CI/CD pipeline (GitHub Actions) with automated testing and linting, catching regressions before release and cutting manual release overhead by 60%
- Use GitHub Copilot, Claude Code, and ChatGPT as daily AI coding agents, critically reviewing and guiding AI-generated code for correctness, maintainability, and production readiness rather than accepting output at face value

Data Engineering Intern

Carters Inc. — Atlanta, GA | May 2025 – Aug 2025

- Built automated, orchestrated pipelines on AWS (Glue, Lambda, Step Functions) in Python, reducing vendor file processing time from 30 days to under 24 hours while validating 15M+ records across 3,500+ files
- Implemented CloudWatch monitoring and telemetry for pipeline health, and used SQL-based validation in Athena to catch data-quality regressions and raise reporting accuracy by 25%

Software Developer

National Parking Services — Atlanta, GA | Mar 2025 – Present

- Developed Spayroll+ (Python, TypeScript, Pandas), designing a modular, automated processing pipeline with error handling and retry logic that cut manual processing time by 80%
- Partnered directly with business stakeholders across multiple sites to gather requirements and ship reliable production software end to end

AI Data Specialist (Contract)

Outlier AI — Oakland, CA (Remote) | Jun 2024 – Aug 2024

- Managed AI evaluation workflows for complex computer science tasks, from prompt development through quality review and final submission, contributing to RLHF initiatives targeting model accuracy, safety, truthfulness, and response quality
- Performed quality assurance reviews of other analysts' evaluations, providing structured, auditable feedback against project standards across multiple concurrent assignments
- Identified recurring model failure patterns and recommended improvements to evaluation criteria and processes

PROJECTS

Impearl | React, Node.js, MongoDB, ChatGPT API

- Integrated the ChatGPT API to build an in-app AI assistant guiding users through a full-stack SaaS platform connecting freelancers with businesses
- Designed event-driven architecture with webhook integrations and automated workflows, connecting payment processing, authentication, and third-party APIs; containerized with Docker

EDUCATION

Georgia State University | B.S. in Computer Science | GPA: 3.50 / 4.00 | Aug 2022 – Dec 2025

Relevant Coursework: Machine Learning, Software Engineering, Data Structures, Algorithms, Database Systems
