PROFESSIONAL SUMMARY

Self-directed Software Engineer with a B.S. in Computer Science and hands-on experience architecting, designing, implementing, and testing scalable systems using object-oriented programming/design in Python, JavaScript/TypeScript, and Java. Builds automation frameworks and automated test suites that drive up code coverage and automation metrics, with direct experience critically reviewing and guiding code generated by LLM coding assistants and agent-based frameworks (GitHub Copilot, Claude Code, ChatGPT, n8n). Partners closely with cross-functional teams, applying strong analytical problem-solving and telemetry-driven monitoring to drive operational excellence.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS, Shell scripting

Testing & Quality: Test strategy, automation frameworks, unit/functional testing, automated test suites, code coverage & automation metrics

AI-Assisted & Agentic Development: GitHub Copilot, Claude Code, ChatGPT, n8n/Zapier (agent-based automation), prompt engineering, LLM code review & guidance

Backend & Databases: Node.js, Flask, PostgreSQL, MySQL, MongoDB, DynamoDB, database design, data modeling

Cloud & Infrastructure: AWS (Lambda, Step Functions, Glue, S3, CloudWatch, Athena), Docker, Terraform, IaC, CI/CD (GitHub Actions)

Tools & Practices: Git, Linux, Agile methodologies, code review, debugging, performance optimization, telemetry & monitoring

EXPERIENCE

AI Engineer (Contract)

Cornerstone Construction Co. — Atlanta, GA | Mar 2026 – Present

- Built ProConstruct platform using TypeScript, React, Python, and Supabase, collaborating with stakeholders to centralize field and office workflows into a unified, scalable system deployed on cloud infrastructure
- Architected and implemented CI/CD pipeline using GitHub Actions, designing automated testing and linting workflows that drove up code coverage and release quality, reducing manual release overhead by 60%
- Leveraged GitHub Copilot, Claude Code, and ChatGPT to guide AI-generated code toward desired outcomes, critically reviewing and refining implementations for correctness, maintainability, and performance

Data Engineering Intern

Carters Inc. — Atlanta, GA | May 2025 – Aug 2025

- Engineered scalable cloud infrastructure and automated workflows on AWS (Glue, Lambda, Step Functions) using Python-based automation scripts, reducing vendor file processing time from 30 days to under 24 hours
- Implemented monitoring, logging, and telemetry using CloudWatch to track pipeline performance and drive operational excellence, enabling proactive issue detection and increasing reporting accuracy by 25% via SQL-based data validation in Athena

Software Developer

National Parking Services — Atlanta, GA | Mar 2025 – Present

- Developed Spayroll+, an internal operations platform using Python, TypeScript, and Pandas, designing a modular, automated processing pipeline with error handling and retry logic that reduced manual processing time by 80%
- Built visualization dashboards and reporting features tracking revenue, labor costs, and operational metrics, applying object oriented design principles to keep the codebase maintainable and extensible
- Collaborated with business stakeholders to gather requirements and iterate on features, testing and debugging across the full stack to ship reliable production software

PROJECTS

Impearl | React, Node.js, MongoDB, ChatGPT API

- Built Impearl, a full-stack SaaS platform connecting freelancers with businesses, featuring integrated payment processing, user authentication with account verification, and a polished UI/UX designed for ease of use
- Integrated the ChatGPT API to power an in-app AI assistant that guides users through the platform, and connected third-party APIs to support core platform functionality

Diget | Python, Flask, MySQL, JavaScript, GitHub

- Collaborated in a 3-person team to build a digital closet management system for uploading, categorizing, and tracking clothing items, earning 2nd place in a semester-long competition
- Individually designed and implemented the MySQL database schema, ER diagrams, and CRUD operations, integrating them with a Flask backend and web interface, coordinating team contributions through GitHub

EDUCATION

Georgia State University | B.S. in Computer Science | GPA: 3.50 / 4.00 | Aug 2022 – Dec 2025

Relevant Coursework: Software Engineering, Data Structures, Algorithms, Database Systems, Operating Systems
