

Oluwanifemi Nicholas Onafuye

+1 (678) 707-1088 | nicholasonafuye@gmail.com | www.linkedin.com/in/nicholas-onafuye

OBJECTIVE

Recent Computer Science graduate with experience building full-stack web applications, cloud-based systems, and automated workflows. Proficient in Python, TypeScript, React, and Node.js with hands-on experience in API development, database design, and AWS cloud services. Proven ability to deliver scalable solutions that improve efficiency and user experience.

EDUCATION

Georgia State University - B.S. in Computer Science, GPA: 3.50/4.00

Aug 2022 - Dec 2025

Relevant Coursework: Data Structures, Software Engineering, Software Development, Algorithms, Database Systems, Data Science, Robotics, Machine Learning

EXPERIENCE

Carters Inc.

Atlanta, GA

Data Engineering Intern | AWS, DBeaver, Python, SQL, Jira, Bolt, VS Code

May 2025 - Aug 2025

- Built an AWS-based pipeline (Glue, Lambda, Step Functions) that reduced vendor file processing time from 30 days to under 24 hours through automated workflows
- Designed scalable metadata management system using DynamoDB and Python, implementing dynamic schema handling that supports 1000s of files and processes millions of rows of data
- Analyzed data quality metrics using Athena and DBeaver, identifying and resolving data inconsistencies that improved reporting accuracy by 25%
- Collaborated cross-functionally with business stakeholders to document data workflows and translate technical requirements into actionable insights, tracking deliverable in Jira

National Parking Services

Atlanta, GA

Software Developer | Python, Pandas, Matplotlib, Excel, CSV, Data Analysis, Automation, Reporting

Mar 2025 – Current

- Developed Python-based automation tools to streamline operations, building systems that process 500+ weekly transactions with real-time data synchronization
- Built automated payroll processing system using Pandas and object-oriented design patterns, reducing processing time by 90% across multiple sites
- Engineered ETL pipelines to process operational data from CSV/Excel sources, implementing error handling and data validation
- Created interactive dashboards using Matplotlib and Excel to visualize metrics, enabling data-driven decision that increases efficiency by 15%

North Pole Detailing

Atlanta, GA

Founder & Operator | Acquisition, Sales, Marketing, Operations, CRM, Web Development

Dec 2025 - Current

- Designed and deployed full-stack booking platform implementing user authentication, payment processing, and automated scheduling that reduced booking time by 60%
- Built responsive web application with integrated CRM functionality, managing customer data and automated email notifications
- Developed customer analytics system tracking acquisition costs and conversion rates across marketing channels, improving ROI by 40%

PROJECTS

Spayroll+ | Python, TypeScript, Pandas, Matplotlib, CSV, PDF Generation, VS Code

- Developed payroll management system using Python and TypeScript, implementing wage calculation algorithms and PDF report generation
- Engineered modular data processing pipeline with error handling to transform raw shift records into structured datasets
- Built visualizations dashboard tracking payroll trends and labor costs, identifying optimization opportunities

Impearl | React, MongoDB, Node.js, Lovable, Vercel, Google Sheets API, ChatGPT API, Zapier, n8n

- Built full-stack web application for service booking using React frontend and Node.js backend with MongoDB database
- Implemented automated invoicing system integrating Stripe payment processing and Google Sheets API for financial tracking
- Designed event-driven architecture with webhook triggers to generate invoices and send automated payment links, reducing manual operations, by 95%

Certifications:

Databricks - Data Engineering Certificate & Generative AI Fundamentals

Google - Introduction to Image Generation Certificate
